

Device Settings

Learn on your own

Device settings let you change many things on your device, such as the speaker volume, brightness, and text size

Device Settings

1

Open Settings

- Find the Settings app. You can look for it on your device's home screen or in the app launcher. The app launcher shows you all the apps you have on your device.
- The Settings icon looks like a gear. It can look a bit different depending on your version of Android.
- Tap on the **Settings** app to open it

2

View the settings menu

- The settings menu lets you change things on your device, like:
 - Volume
 - Screen brightness
 - Text size

3

Adjust the brightness and volume

- Tap on **Display** and then tap **Brightness level**. Slide the slider right to make your screen brighter or to the left to make your screen darker.
- The brighter your screen is, the better you can see it. But a brighter screen also drains your battery faster.
- Go back to the settings menu. Then, tap **Sound**. Here you can change your ringtone volume and make it so different apps have different ringtones. Move the sliders to adjust the volume for each sound.

4

Make the text larger

- You can change the text size. If you find it hard to read the screen, larger text can help.
- Go back to the settings menu. Search for **Accessibility** and tap on it.
- Tap the option called **Font Size**. Slide the slider right to make text larger or left to make text smaller.
